Software Development Skills Front-End, Online course

<Name: Pramisha Shrestha>, <Student number = 002240486>

**LEARNING DIARY, CT70A9111 – SOFTWARE DEVELOPMENT SKILLS:
FRONT- END MODULE**

Date: 16.05.2026

Activity:

Reviewed the course instructions and module requirements. Set up my working environment using Visual Studio Code and Git Bash. After learning about the Visual Studio Code and Git Bash and setting it up, I thought of the things I wanted to create using it, and after navigating different topics, I was able to choose one that satisfied me the most, so I created the project folder structure and explored how HTML, CSS and Java Script connect together.

Learning Outcome:

I learned the basic workflow of a fronted project and how to organize files correctly. I also learned the purpose of Git and GitHub. At first, I was unsure how the different files worked together, but after experimenting I started to understand the structure of a web project.

Date: 17.05.2026

Activity:

Worked on the Introduction and Base HTML section of the course. Created the first HTML page and learned about responsive web design.

Learning outcome:

I learned how HTML provides the structure of a webpage. I also learned why responsive design is important and how websites should adapt to different screen sizes.

Date: 18.05.2026

Activity:

Completed the Links and Core CSS section. Added navigation links and started styling the website.

Learning outcome:

I learned how CSS controls the visual appearance of a webpage. I practiced colors, spacing, typography and layouts. I also learned how CSS files are linked to HTML documents.

Date: 19.05.2026

Activity:

Worked on Buttons and Utility Classes. Created buttons and experimented with different styles.

Learning outcome:

I learned how reusable CSS classes make styling easier. I also learned how hover effects improve user interaction and website appearance.

Date: 20.05.2026

Activity:

Completed the CSS Grid and Cards section. Built content cards and arranged them using CSS Grid.

Learning outcome:

I learned how CSS Grid can create responsive layouts. Initially I had problems with spacing and alignment, but after experimenting with different settings I achieved a more balanced layout.

Date: 21.05.2026

Activity:

Added a FAQ section and created expandable content areas.

Learning outcome:

I learned how information can be organized more effectively using FAQ sections. I also gained a better understanding of page structure and user experience.

Date: 22.05.2026

Activity:

Focused on responsive design and media queries. Tested the website on different screen sizes.

Learning outcome:

I learned how media queries allow a website to adapt to mobile devices. Some elements looked broken on smaller screens, so I adjusted layouts and spacing until the design worked properly.

Date: 23.05.2026

Activity:

Created a coursework practice website using the concepts learned from the tutorials.

Learning outcome:

This helped me combine navigation, buttons, cards, FAQ sections and responsive layouts into one project. It gave me confidence before starting the final project.

Date: 24.05.2026

Activity:

Started planning my final project. I decided to create a wildlife-themed website because I enjoy learning about animals and nature.

Learning outcome:

I learned how important planning is before starting development. I outlined the pages, navigation structure and visual style I wanted to use.

Date: 25.05.2026

Activity:

Created the homepage and navigation for the wildlife project.

Learning outcome:

I practiced HTML structure and CSS styling. I became more comfortable creating layouts independently instead of only following examples.

Date: 26.05.2026

Activity:

Added animal cards and created multiple animal-related sections.

Learning outcome:

I improved my understanding of CSS Grid and responsive layouts. I also learned how to organize content across multiple pages.

Date: 27.05.2026

Activity:

Added a slideshow feature and experimented with image transitions.

Learning outcome:

I learned how JavaScript can make a webpage more interactive. I adjusted slideshow timing and tested different settings to improve the user experience.

Date: 28.05.2026

Activity:

Implemented a FAQ accordion and additional interactive features.

Learning outcome:

I learned how JavaScript can be used to show and hide content dynamically. This helped me better understand event handling and DOM interaction.

Date: 29.05.2026

Activity:

Added a parallax section and experimented with visual effects.

Learning outcome:

I learned how CSS effects can improve the appearance of a website. I also learned the importance of keeping design elements balanced and readable.

Date: 30.05.2026

Activity:

Worked on mobile responsiveness and tested the website on different screen sizes.

Learning outcome:

I learned how small design changes can significantly improve usability on mobile devices. Responsive design became much clearer after practical testing.

Date: 31.05.2026

Activity:

Started deploying the project using GitHub and GitHub Pages.

Learning outcome:

This was one of the most challenging parts of the course. I learned how repositories work and how projects can be published online.

Date: 05.06.2026

Activity:

Continued troubleshooting Git and GitHub issues. Encountered repository and push errors.

Learning outcome:

I learned that debugging and problem solving are important development skills. Although the process was frustrating at times, solving the issues improved my confidence with Git.

Date: 08.06.2026

Activity:

Successfully uploaded all project files and deployed the website.

Learning outcome:

I learned the complete workflow from development to deployment. Seeing the website online was a rewarding experience and showed me how the different technologies work together.

Date: 12.06.2026

Activity:

Performed final testing, reviewed links, slideshow functionality, responsiveness and page structure.

Learning outcome:

I learned the importance of quality assurance and testing before submission. Small issues were identified and corrected during the review process.

Date: 15.06.2026

Activity:

Completed the learning diary and reviewed the entire project.

Learning outcome:

This course improved my understanding of HTML, CSS, JavaScript, responsive design, Git and GitHub. The project helped me gain practical frontend development experience and increased my confidence in building responsive websites independently.
